

## **Village of Nakusp Water Supply Update**

The Village of Nakusp appreciates the commitment to water conservation that both Nakusp residents and businesses have made over the last few months. While seasonal water conservation measures have become routine for most municipalities across the province, the Village would like to thank you for your efforts this summer.

To address possible concerns about the Village water supply, the Village of Nakusp has retained the services of 9dot Engineering and Aqua Diversities Waterworks Inc. to complete an assessment of water supply vs. water demand, as well as to optimize surface water treatment plant and the deep well system.

Over the coming months, water consumption data will be collected, and a detailed engineering assessment on the Nakusp Water supply will be completed. This is necessary to determine what is required to optimize current water supply needs as well as plan for future water needs. The outcome of these investigations and data analysis will be a detailed report and Action Plan that will provide the Village with recommended options to ensure water needs of the community are met (both short and long-term).

An implementation strategy provided will allow the Village to coordinate and budget water supply and treatment improvements. The Village of Nakusp is committed to finding solutions to better serve the current and future needs of Nakusp residents, businesses and visitors.
